

KOUROSH JALILIAN

Backend Software Engineer | Python & Go Developer

Location: Kermanshah, Iran • Phone: +98 938 593 9627 • Telegram: @jkurosh

GitHub: github.com/jkurosh • LinkedIn: linkedin.com/in/kourosh-jalilian-129170338 • Portfolio: jkurosh.github.io

PROFESSIONAL SUMMARY

Backend Software Engineer with a solid foundation in Chemical Engineering, applying analytical problem-solving and quantitative reasoning to software design and system architecture. Specialized in developing server-side applications using Python (Django, FastAPI, Flask) and expanding expertise into Go (Golang) for high-performance microservices. Hands-on experience designing production-ready RESTful APIs, relational database schemas (PostgreSQL, MySQL, SQLite), and web scraping pipelines (Scrapy). Experienced in containerization with Docker, CI/CD pipelines, Git version control, and Linux environments. Builds maintainable systems adhering strictly to SOLID principles, Clean Code, and Clean Architecture.

TECHNICAL SKILLS

Programming Languages: Python, Go (Golang – Currently Learning / In Progress), JavaScript, TypeScript, SQL, Bash

Backend Frameworks & Libraries: Django, Django REST Framework (DRF), FastAPI, Flask, Scrapy, Balethon

Databases & ORM: PostgreSQL, MySQL, SQLite, MongoDB, Django ORM

DevOps, Tools & Infrastructure: Docker, CI/CD, Git, GitHub Actions, Linux, Bash, Nginx, RESTful API Design

Architecture & Principles: Object-Oriented Programming (OOP), SOLID Principles, Design Patterns, Clean Architecture, Clean Code, Modular System Design

PROJECTS

Digikala Price Tracker | *Python, Django, DRF, Scrapy, PostgreSQL, JavaScript, HTML5/CSS3*

github.com/jkurosh/digikala-price-tracking

- Engineered an automated web scraping pipeline using Scrapy to extract product details across multiple categories (Mobile, Laptop, Gaming Consoles).
- Architected a custom Django pipeline storing normalized data into PostgreSQL, preventing duplication using unique product IDs.
- Implemented conditional state tracking logic to log new PriceHistory records only upon detected price shifts, optimizing storage and query performance.
- Developed modular Django REST Framework (DRF) endpoints with dynamic filtering (django-filter), search, and multi-field ordering.
- Built a lightweight, vanilla JavaScript frontend consuming REST endpoints to display and visualize historical pricing trends.

VetLMS – Veterinary Learning & Diagnostic Platform | *Python, Django, PostgreSQL, Docker, REST API, HTML/CSS, JavaScript*

vetlms-frontend.vercel.app | github.com/jkurosh

- Architected and deployed a modular LMS backend handling courses, interactive clinical case studies, and diagnostic analysis tools.
- Structured relational PostgreSQL database schemas and optimized queries for high-efficiency data retrieval.
- Implemented payment gateway integrations and fine-grained role-based access control (RBAC).
- Containerized the backend service using Docker to standardize environments and streamline deployments.

Bale Appointment & Daily Quiz Bot | *Python, Balethon API, SQLite, Khayyam (Jalali Calendar)*

github.com/jkurosh

- Developed an asynchronous chatbot backend on the Bale messenger platform to automate user onboarding and appointments.
- Implemented relational SQLite schemas handling user profiles, appointment bookings, daily quiz states, and response records.
- Built automated scheduling logic to clean up expired appointment slots and handle localized Jalali calendar conversions.
- Designed modular query routines to track daily question participation and persist historical user engagement data.

EDUCATION & COURSES

B.Sc. in Chemical Engineering | Razi University

Applying mathematical modeling, algorithmic thinking, and quantitative engineering principles to backend system architecture.

Technical Courses & Certifications (Quera): Basic Python, Advanced Python, Software Design Patterns.

LANGUAGES

Persian: Native | **English:** B2 (Professional Working Proficiency) | **German:** A2 (Elementary)
